

New trends,
room for "cool" ideas

Modern shapes and forms, plenty of space with flexible, functional solutions: the kitchen is evolving. Ariston's keen eye for new stylistic trends and changes in life styles is looking for new ideas to meet emerging needs. Like this built-in refrigeration drawer system with large storage baskets-drawers that compliment both modern and traditional kitchens.

Not an alternative to the conventional refrigerator, just an extra comfort. A brilliant, revolutionary idea that will change the way your kitchen can be designed.

Cool has conquered new spaces

Refrigeration Drawers

Nothing could be handier!

A highly ergonomic design. Nothing could be handier than 2 sliding, fully removable drawers built under the counter so that you can store all kinds of food and get to them easily, even those in the back. Furthermore it allows perfect visibility from above of all the contents, at a glance.

1

Cutting-edge technology at its most efficient.

4

In order to better protect the food and preserve them in the most hygienic state, the inside of the refrigerator has been treated with a patented permanent film derived from silver rock that stops mold or bacteria. Not only the best conservation, but also with the minimum consumption.

Making the most of space.

The space inside the drawer is designed to be used to the fullest. It is highly flexible and fitted with different types of containers that slide into place or can be moved around as required providing room for even the bulkiest food or items as tall as a 1 gallon jug of milk. The functional salad crispers can be inserted either on the upper or lower drawer as well as taken out even more room. Convenient storage of up to 3 bottles suitable for keeping the beverages at the right temperature, and if you do not need this, just close it and it will disappear.

2

Always at the right temperature.

3

Not all food must be preserved at the same temperature; there is particularly delicate food such as meat, fish and some types of cheeses that require lower temperatures. That's why Aristons offers two different temperature zones, one in each drawer, in order to guarantee a perfect cooling for all of the items you store: between 15°F and 50°F in the lower drawer for delicate food and between 25°F and 60°F in the upper drawer, suitable for fruits, vegetables, eggs, butter, yogurt, wine, etc.

Trouble free design.

6

Ariston reinvents and revolutionizes the cooling space concept. The new refrigeration drawer adapts to every kitchen need and provides unlimited design options from classical projects to modern ones, even in those ones that have islands, where the horizontal lines are the main actors.

Not a small player.

Unlike other under counter refrigerators this big box has the room for more than just soda cans and water. The internal space has been styled to be used in every single compartment. It offers innovative solutions such as two professional stainless steel containers, ideal for protecting food with intense aromas, such as cheese, meat or fish. Remove and wash them in the dishwasher. Of course it would not be complete without the handy bottle racks.

5

Refrigeration drawer presented with kit inox doors ZDR 36 IX

Its width allows it to fit in both a 90 cm European cabinet or a 36" American cabinet due to its side trim. Offering multiple design opportunities: 1) utilize the ZDR 36 IX and match the experience line design handle with other Ariston's appliances, 2) match your custom panel in your kitchen for a hidden and seamless styling, 3) or combine both our ZDR 36 IX and your custom panel for a unique design.
